AlburyCity - Planning & Development Committee Agenda

PDC6 REPORTS/MINUTES OF COMMITTEES & WORKING PARTIES

Introduction

Enclosed are the Minutes and Recommendations of the Companion Animals Advisory Panel meeting held on Wednesday 17 August 2016 at 5.30pm.

Recommendation

That the Minutes/Recommendations of the Companion Animals Advisory Panel meeting held on Wednesday 17 August 2016 at 5.30pm be received and noted.

Note

The Minutes of Advisory Committees and Working Parties may come to Council for noting prior to the adoption of the Minutes by the relevant Committee or Working Party. This is to ensure timely information to the Council. Should an Advisory Committee or Working Party subsequently agree that the Minutes should be changed, this will be noted in the next set of Minutes.

PDC7 OFFICERS REPORTS FOR CONSIDERATION

PDC7.1 Election of Deputy Chairperson Planning & Development Committee 2016/17

DATE 4 October 2016

CONFIDENTIAL No

FURTHER ENQUIRIES TO Frank Zaknich
Executive Services

PHONE 6023 8270

Purpose of Report

The purpose of the report is for the Planning & Development Committee members to elect the Deputy Chairperson for the next 12 months.

Background

At the Council Meeting held on Monday 26 September 2016, Council elected Committee Members and a Chairperson to the Planning & Development Committee, and determined that the election of the Deputy Chairperson would take place at the Community & Cultural Committee Meeting scheduled for Monday 10 October 2016.

Issues

The Regulations

Section 267 of the *Local Government (General) Regulation 2005* does not require the council or a Committee of the council to elect a Deputy Chairperson.

If the Committee chooses not to elect a Deputy Chairperson, and the Chairperson is not available to preside at a future meeting, the Committee must elect a member of the Committee to be Acting Chairperson of the Committee on the night.

Voting/Election Process

Should nominations be called for Deputy Chairperson of a Committee, and if more than one nomination is received under the Council's Code of Meeting Practice for Councillors, Staff and Delegates Part 3 Section 29(g), the voting method if by open voting.

"(g) Voting at a Council Meeting include voting in an election at such a meeting is to be by open voting (such as on the voices or by show of hands)."

The counting process for open voting is the same as for an Ordinary Ballot:

1. If there are only two candidates, the candidate with the higher number of votes is elected.
 2. If there are only two candidates and the votes are tied, the person elected is chosen by lot. In this case the name of the candidate drawn at random by the Returning Officer is declared elected.
 3. If there are three or more candidates, the one with the lowest number of votes is excluded. In this regard if two or more candidates are tied for the lowest number, the Returning Officer draws one at random by lot, and that person is deemed to be the excluded candidate.
-

AlburyCity - Planning & Development Committee Agenda

4. This procedure continues until there are only two candidates remaining, at which time the procedures set out in 1. and 2. above will apply.

Conclusion

It would provide more certainty for the Committee if it elects a Deputy Chairperson for 2016/17. The Returning Officer will be the General Manager, with the assistance of the Executive Assistant to the General Manager.

Recommendation

That the Committee recommends to Council that Council:

- a. Invite nominations for the position of Deputy Chairperson for the next 12 months; and
- b. Conduct an election for the Deputy Chairperson in the event of a ballot being required.

AlburyCity - Planning & Development Committee Agenda

PDC7.2 Albury Development Monitor 2015-2016

DATE 12 September 2016

CONFIDENTIAL No

FURTHER ENQUIRIES TO Matt Johnson
Planning & Environment

PHONE (02) 6023 8173

Purpose of Report

The purpose of this report is to present Council with the Albury Development Monitor 2015-2016 (formerly known as the *Albury Land Monitor*) for the period 1 July 2015 to 30 June 2016.

Background

The Albury Development Monitor provides key statistics in relation to the production and consumption of vacant residential, rural residential, commercial and industrial land in Albury. The Monitor also includes information on new commercial and retail floor space created throughout the year.

This information enables Council to determine if sufficient vacant land is available to meet market demand and identify production and consumption trends impacting the city. Market demand is determined by analysis of the Development Monitor statistics in conjunction with other external factors. In response to this information, Council is able to make the appropriate zoning and development decisions to ensure that there is a sufficient supply and choice of vacant land going forward.

The Albury Development Monitor is compiled using data from AlburyCity's property management system, as well as data provided by Taylor Byrne Property Valuers (formerly Cosgraves) with regards to vacant lot sales and prices. The system classifies a lot as vacant if it has a registered Deposited Plan (DP) with the Land Titles Office, but has not had a Construction Certificate (CC) or Complying Development Certificate (CDC) issued. A CC or CDC is required prior to the commencement of construction of new dwellings or buildings on a vacant lot.

The Albury Development Monitor 2015-2016 has recently been completed and will provide local businesses, property developers, potential investors and Council with access to insightful and relevant land information.

Issues

The Albury Development Monitor supports the following outcomes and targets of Albury 2030:

- *Outcome 1.3 – Plan and cater for increased population growth;*
- *Outcome 1.3a – Albury Land Monitor (residential, commercial and industrial sectors);*
 - *Maintain a diversity of options amongst all sectors and continue to meet demand for opportunities of land development.*
 - *Maintain existing development with opportunities for infill development.*

AlburyCity - Planning & Development Committee Agenda

- *Achieve a minimum 10 years supply of undeveloped urban land (commercial, industrial and residential).*

The preparation of the Albury Development Monitor report is consistent with the outcomes and targets of Albury 2030 and provides Council with up to date information to ensure a steady and reliable supply of residential, rural residential, commercial and industrial zoned land.

Discussion

The key findings from this year's Development Monitor are:

Residential Land

- As at 30 June 2016, there were 459 vacant residential lots in Albury. Over 45% of these vacant lots are located in Thurgoona and a further 18% in Springdale Heights and 9% in Glenroy and Hamilton Valley respectively.
- 286 new vacant lots were produced in the city. This is similar to the 285 lots produced in 2014-2015 and represents a continued supply of residential land available to the market.
- 50% of vacant lots produced in the city were located in Thurgoona, primarily in Somerset Rise, Woolshed Estate, Iluka Views and Beaumont Park. 127 new lots were also produced across Springdale Heights, Glenroy, Lavington and Hamilton Valley, primarily in Ettamogah Rise, North Ridge, Bellevue and Hume Country Estates; equating to 44% of vacant residential lots produced for the year.
- 361 vacant lots were consumed in the city. This is a 15% increase compared to the 313 lots consumed in 2014-2015, representing a continued increase in the demand for vacant residential land in Albury.
- 62% of vacant lots consumed were located in Thurgoona, which continues to be the city's residential growth area. 145 vacant lots were also consumed in Glenroy, Lavington, Hamilton Valley and Springdale Heights; equating to 30% of vacant lots consumed for the year.
- The 10 year average for the consumption of vacant lots is 208.
- More recently, the five year average for the consumption of vacant lots is 260. This highlights the significant growth and demand for residential land since 2011-2012.
- Profile ID forecasts that from 2011-2036 there will be a need for an additional 7,443 new dwellings to be constructed in Albury. On average this will require the construction of approximately 300 new dwellings every year for the next 25 years to cater for a projected population increase of 17,378 new residents.
- New subdivisions included 'Beaumont Park' Stage 3, 'Bellevue' Stage 2, 'Ettamogah Rise' Stage 2, 'Hume Country' Stage 3.1, 'Iluka Views' Stage 2, 'Macarthur Grove' Stage 1, 'Mountain Rise' Stage 5, 'North Ridge' Stage 1, 'Somerset Rise' Stage 2.1 and 'Woolshed' Stage 1. These new estates have resulted in the production of 266 vacant lots across the city.
- Easternview Estate is the city's largest residential subdivision. Of the 441 lots created as part of this subdivision, 18 or 4% remain vacant.
- 193 new dwellings were created as part of a dual occupancy or multi dwelling housing development; this represents a 45% increase compared to 2014-2015, with the majority of these being self-contained units. This type of housing makes up 34% of total dwellings in the city, showing a demand for alternative smaller lot housing options.

AlburyCity - Planning & Development Committee Agenda

- 56% of new multi dwelling housing development has occurred in Thurgoona and Lavington.
- 563 new dwellings were created in the city. This a 21% increase compared to the 466 constructed in 2014-2015.
- 44 new lots were created as part of a Community Title or Strata Title subdivision; this represents a 48% decrease compared to 2014-2015.
- Albury has over 50 year's supply of zoned residential land available in Thurgoona/Wirlinga and Hamilton Valley to cater for the long term growth of the city.
- \$162 million was invested in residential construction. This is a 12% increase compared to 2014-2015, reflecting a large investment in residential construction.
- In the past five years more than \$833 million has been invested in construction across the city; \$617 million or 74% of this total is related to residential development across Albury.
- The average sale price of vacant lots is \$146,044. This is an 8.5% increase compared to 2014-2015.
- Vacant lots greater than 600m² and less than 1,500m² are the most popular lot sizes since 2007-2008 when compared to lots less than 600m² and lots greater than 1,500m².

Commercial and Rural Residential Land

- 10 Large Lot Residential lots were produced in the city.
- 10 Industrial lots were produced in the city.
- Larger rural residential lots continued to be popular. Nine lots zoned either Rural Living or Large Lot Residential were consumed; these lots are predominantly located in Table Top.
- As at 30 June 2016, there were 100 vacant industrial lots in the city; approximately half of these lots are located in Thurgoona.
- 66 industrial lots have been produced in the city since 2006-2007. Approximately half of these lots were created as part of the 'Airside North' industrial estate.
- 31 industrial lots have been consumed in the city since 2011-2012. 74% of these were consumed in the 'Airport Park', 'Airside North' and Dalling Road industrial estates.
- Albury has over 20 years supply of industrial land available primarily in Airside North and Nexus to cater for the long term growth of the city.
- As at 30 June 2016, there were 24 vacant lots in Albury's commercial areas; 14 of these are located in the Albury CBD, eight in the Lavington CBD and two in the Neighbourhood Centre, Local Centre, Commercial Core, Mixed Use, Business Development, Enterprise Corridor or Business Park zones.
- Existing retail floor space in the city is 231,827m². This is spread across the Albury CBD, Lavington CBD and East Albury Bulky Goods Centre, as well as number of smaller neighbourhood or local centres.
- Retail floor space has increased by approximately 499m² over the last 12 months. This includes the construction of a food and drink premise at 52 Borella Road, East Albury.
- The *Albury Retail Development Strategy 2015 to 2025* estimates that an additional 22,800m² to 39,400m² of retail floorspace could be supported over the next 20 years.
- Existing commercial floor space in the city is 98,238m². This is primarily located in the Albury CBD and Lavington CBD.
- Commercial floor space has increased by approximately 1,858m² over the last 12 months. This is a 1.9% increase compared to 2014-2015 and includes the construction of a new office building at 564 David Street, Albury, commercial office expansions at 639-653 Dean Street,

AlburyCity - Planning & Development Committee Agenda

Albury and 206 East Street, East Albury, as well as an expansion of an existing indoor recreation facility at 359 Urana Road, Lavington.

- \$41 million was invested in construction for non-residential purposes. This is a 19% decrease compared to 2014-2015.
- The five year average for investment in construction for non-residential purposes is \$43 million.
- In the past five years more than \$216 million has been invested in non-residential construction across the city.

Risk

- Business Risk - The level of business risk associated with the Albury Development Monitor is considered low, however, in the absence of this annual reporting, there is a risk that Albury may not be able to maintain its current supply of undeveloped urban land or provide for diversity and demand in land development.

The continued level of demand is having an impact upon Council in relation to infrastructure demand and service delivery and the active monitoring and review of development statistics and associated reports allows Council to monitor its level of resource commitment to ensure that the demands of such development can be appropriately catered for.

The long term funding of infrastructure also poses a significant risk to Council's financial sustainability. Failure to adequately monitor, plan for and finance the augmentation or replacement of existing infrastructure and provision of new infrastructure could pose significant risk to Council's financial sustainability and may hamper or restrict growth. Detailed analysis and understanding of development trends will assist Council to adequately plan and deliver required infrastructure and services.

- Corporate Risk, WHS and Public Risk - The level of Corporate Risk, WHS and Public Risk associated with the Albury Development Monitor is considered low as this report is for the purposes of statistical reporting.

Notwithstanding, failure to adequately plan for and manage growth and the provision of infrastructure to support growth could have a significant impact on the city's image, reputation and, as a result, development outlook.

- Delivery Program Risk - The level of development has an impact on the expected delivery of Council services. Therefore it is appropriate to continue to report on the monitoring of development activity as undertaken in this report. The demand on Council resources will directly affect the Delivery Program due to the responsive nature of the service. In addition the continued growth and expansion of the city will place demand on our existing assets and drive demand for new infrastructure. The Delivery Program will need to be monitored and reviewed to ensure Council is planning appropriately and therefore are able to meet current and future demands.

Community Engagement

AlburyCity - Planning & Development Committee Agenda

A copy of the Albury Development Monitor 2015-2016 has been provided for Councils information; a copy will also be tabled at the meeting for members of the public.

The Albury Development Monitor 2015-2016 will be available in both electronic and hardcopy format. A copy of this report will be distributed to property developers, real estate agents, valuers and industry professional's in Albury.

Once formally received by Council, the Albury Development Monitor 2015-2016 will be available electronically from the AlburyCity website.

Options

The Committee has the following options in relation to this report:

1. Note the contents of this report and the Albury Development Monitor 2015-2016; or
2. Not note the contents of this report.

As this report is for the purposes of statistical reporting, Option 1 is recommended.

Conclusion

The Albury Development Monitor 2015-2016 is an important tool for Council to determine whether sufficient vacant residential, rural residential, commercial and industrial land is being created to meet market demand and to develop strategies to stimulate investment if and when required.

As highlighted within this report, there has been a significant growth and demand for residential land since 2011-2012. In particular, there were 563 new dwellings created in the city in 2015-2016, which is a 21% increase as compared to 2014-2015. Of these, 34% of the dwellings comprised a dual occupancy or multi dwelling housing development, which also shows an increasing demand for alternative smaller lot housing options.

Despite the increasing demand for residential land, the Albury Development Monitor 2015-2016 identifies that Albury still has a sufficient level of vacant residential, rural residential, commercial and industrial land available to meet market demands in the short to medium term. Importantly, the report also highlights the significant development activity occurring across the city and particularly in the Thurgoona area. This is particularly relevant for planning and funding the provision of infrastructure and services to support new growth.

Recommendation

That the Committee recommends to Council that Council receive and note the report on the Albury Development Monitor 2015-2016.

1. Albury Development Monitor 2015-2016.

AlburyCity - Planning & Development Committee Agenda

PDC7.3 Planning Proposal - Rezoning of land in Table Top and Splitters Creek

DATE 21 September 2016

CONFIDENTIAL No

FURTHER ENQUIRIES TO Chris Graham **PHON** 6023 8148
Planning and Environment **E**

Purpose of Report

The purpose of this report is to seek Council support for a Planning Proposal that seeks to amend the *Albury Local Environmental Plan 2010* (ALEP 2010) insofar as the land use zoning and minimum lot size (MLS) provisions for land in Table Top and Splitters Creek.

Both land use zoning and minimum lot size amendments proposed as part of this Planning Proposal are consistent with the settlement pattern recommendations as contained within the Council adopted (and NSW Department of Planning and Environment endorsed) *Rural Lands Strategy for Table Top and Splitters Creek* (Rural Lands Strategy).

A Locality Plan showing the location of the land subject to the Planning Proposal is provided as Attachment 1 for Councillors information and reference.

A copy of the Planning Proposal is provided as Attachment 2 for Councillors information and reference.

Background

Local Government boundary adjustments initiated in 2004 resulted in large parts of the surrounding former Hume Shire Council (including both Table Top and Splitters Creek) becoming part of the Albury Local Government Area (LGA). Consequently, AlburyCity also inherited the Hume Shire planning controls under the *Hume Local Environmental Plan 2001* that allowed for the subdivision of land down to a 2ha minimum with an 8ha average lot size in the 'Rural Living Zone' that applied across much of both Table Top and Splitters Creek.

These provisions enabled land fragmentation across much of Albury's rural areas creating the potential for land use conflict with existing agricultural pursuits, placed restrictions on future long term urban development opportunities and created issues with respect to the sustainable provision of infrastructure and services.

As part of AlburyCity's review of planning controls during the preparation of the *Draft Albury Local Environmental Plan 2010* (ALEP 2010), Council introduced both zoning and minimum lot size provisions that prohibited further subdivision (land fragmentation) predominantly through the implementation of lower densities throughout much of Table Top (40ha MLS) and Splitters Creek (80ha MLS). Council supported and endorsed the proposed changes to both the land use zoning and minimum lot size provisions. This was in recognition and appreciation of the above potential land use conflicts.

During public exhibition of ALEP 2010, AlburyCity received numerous submissions from landowners in both Table Top and Splitters Creek opposing the proposed changes to zoning and minimum lot size provisions on the basis that subdivision opportunities would be removed ('locked up') for an indeterminate number of years.

AlburyCity - Planning & Development Committee Agenda

In response to these submissions, Council resolved to undertake further detailed investigations (in the form of a Precinct Structure Plan) to assist in determining a future settlement pattern that provides for continued rural lifestyle opportunities and also ensures that both existing agricultural and/or future urban land use capabilities (where relevant) are not compromised in Table Top and Splitters Creek.

The Rural Lands Strategy was subsequently prepared over a 14 month period and involved extensive consultation with all relevant persons, landowners, service providers and government agencies.

A significant amount of community consultation was undertaken as part of the preparation of this Strategy in relation to the proposed change in planning controls for Table Top and Splitters Creek.

A summary of this consultation is provided below:

- Initial Scoping Workshop – November 2014 (general public and agency);
- Public Exhibition Information Session – May 2015 (general public and agency);
- Community Forum – August 2015;
- Further consultation with local planning consultants & Rural Fire Service – September 2015.

In total, over 230 residents and landowners attended the initial scoping workshop and information sessions with an additional 75 residents in attendance at the community forum. Overall, 40 submissions were received during the public exhibition period (including six from government agencies and other public authorities).

The Rural Lands Strategy was initially reported to Council on 27 July 2015 and addressed submissions received and issues raised in response to the public exhibition process. A number of late submissions were also received prior to Council's consideration of this report. Due to the level of detail in this report and the issues raised in late submissions received, Council resolved to defer consideration of the Rural Lands Strategy to allow more time to consider the detail in the report and to allow for further community consultation.

A subsequent revised Officers Report was submitted to Council on 24 August 2015. This report considered and responded to all submissions received. This included submissions received during public exhibition, additional late submissions and representations made to the Community Forum. In considering this report, Council resolved not to adopt the Rural Land Strategy (as amended) and instead engage in further consultation with local planning experts and with the NSW Rural Fire Service (RFS).

Accordingly, AlburyCity undertook further consultation and obtained a formal response from the NSW RFS in relation to the Rural Lands Strategy, in particular, bushfire risk in Splitters Creek with regards to the previously recommended settlement pattern as well as that sought via submission and representations. In addition, AlburyCity staff also undertook further consultation with relevant local planning experts.

As a consequence of this additional consultation and work, the Rural Lands Strategy was subsequently adopted by Council on 26 October 2015 (refer to *Attachment 3*).

The preparation, adoption and endorsement of the Rural Lands Strategy has therefore fulfilled Council's previous commitments and a copy of this Strategy will be included as an Appendix to the Planning Proposal.

AlburyCity - Planning & Development Committee Agenda

The Rural Lands Strategy provides a systematic and documented investigation of both Splitters Creek and Table Top to inform and substantiate recommendations relating to settlement pattern, service infrastructure (including utilities and transport) and staging.

In making these recommendations, the Rural Lands Strategy took into consideration the following:

- Future long term urban development opportunities;
- Identification and retention of land for suitable agricultural pursuits;
- Maintaining a supply of sufficient land in appropriate locations for rural lifestyle housing that does not compromise future long term development potential, safeguards existing and ongoing agricultural pursuits, respects natural physical constraints, responds to natural hazards and respects environmental values;
- Coordinated, efficient and sustainable provision and use of necessary infrastructure;
- Identification and resolution of any existing and future potential land use conflicts; and
- Delivery of a safe, efficient and integrated transport network.

The purpose of the Rural Lands Strategy was to inform future planning decisions and provide the framework for statutory planning controls, which will give local communities, developers and investors greater certainty and confidence about future development in Table Top and Splitters Creek.

In summary, the Rural Lands Strategy identified opportunities for rural lifestyle and large lot residential development, whilst protecting productive agricultural pursuits and preserving future urban development opportunities.

Consequently, a number of changes are now recommended to the land zoning and minimum lot size provisions as contained within ALEP 2010, as they relate to Table Top and Splitters Creek, consistent with the settlement recommendations of the Rural Lands Strategy.

Issues

The Planning Proposal is consistent with Council's relevant local planning strategy, being the Rural Lands Strategy, as it seeks to adopt all settlement recommendations (inclusive of proposed changes to land use zoning and minimum lot size provisions).

The preparation of this Planning Proposal also supports Albury 2030 strategic actions under the theme of 'A Growing Economy' including:

- *'1.3.2 Support Albury's population growth - ensure policies facilitate sustainable growth and housing choice without compromising Albury's values.
Progress development of AlburyCity Structure Plans and/or Master Plans*
 - Thurgoona/Wirlinga
 - Splitters Creek
 - Lake Hume and Table Top Villages
 - Table Top.'
- 1.3.3 Review and monitor the Local Environmental Plan and the Development Control Plan with regard to outcomes within Albury 2030;
- 1.3a Albury Land Monitor (residential, commercial and industrial sectors) – Maintain a diversity of options amongst all sectors and continue to meet demand for opportunities for land development; and
- 1.5.1 Promote Albury as a major regional economy and the regional city of choice for lifestyle, career and investment opportunities.

AlburyCity - Planning & Development Committee Agenda

In particular, the rezoning of land for rural lifestyle purposes provides a diversity in housing choice, whilst protecting future long term urban development opportunities. The subject Planning Proposal also seeks to protect existing viable agricultural pursuits, limit potential land use conflicts and maintain Albury as the major economy of choice.

In addition, the preparation of this Planning Proposal also responds to the *Albury Land Use Strategy 2007* (ALUS) that, amongst other things, seeks the following planning outcomes:

- For Table Top, investigate the potential for the central and eastern Table Top area, or precincts in the area, to accommodate rural lifestyle development, define appropriate lot and road layout that provide for rural aspirations without closing off options for long term urban expansion;
- For Splitters Creek, prepare a Local Structure Plan that includes the location and layout of rural residential development areas, taking into account opportunities afforded by the Riverina Highway frontage and that accommodates environmental constraints, including land capability for effluent disposal, suitable slopes, remnant vegetation, bushfire protection and landscape character.

The Planning Proposal has also been prepared in accordance with Section 55 of the *Environmental Planning & Assessment Act 1979* and the NSW Department of Planning & Environment's: *A Guide to Preparing Local Environmental Plans* and *A Guide to Preparing Planning Proposals* (August 2016).

Furthermore, the Planning Proposal provides a documented audit and response to Section 117(2) Ministerial Directions and State Environmental Planning Policies that confirms consistency.

Discussion

The following discussion focuses on issues that have been critical to informing Rural Lands Strategy settlement recommendations, and consequently, Planning Proposal content and subject matter in response to land capability and sustainability considerations, as follows:

- Overview of proposed settlement outcomes sought; and
- Assessment of critical issues including;
 - land supply;
 - natural hazards;
 - infrastructure provision; and
 - impacts on existing and future agricultural pursuits and urban release opportunities.

To assist legibility of this report, consideration and response to above listed critical issues are addressed separately for both Splitters Creek and Table Top as follows:

Splitters Creek:

Proposed settlement outcomes

Informed by detailed investigations, documented analysis and technical evidence (inclusive of constraints analysis, agricultural and urban land capability assessments, rural land use survey, demand and supply assessment) an overview of the Rural Lands Strategy recommended settlement pattern, consequential amendments to ALEP 2010 and other relevant issues as they relate to Splitters Creek are outlined below.

The Rural Lands Strategy recommended that locations lower in the Splitters Creek catchment be developed at a 2-4ha minimum lot size along the Riverina Highway and the Bretton Road area, whilst

AlburyCity - Planning & Development Committee Agenda

locations higher in the Splitters Creek catchment be developed at an 8ha minimum lot size at the northern end of Splitters Creek Road. Whilst this only provides moderate development outcomes (44 additional lots), settlement outcomes sought recognise environmental sensitivities by avoiding steep terrain, heavy vegetation, waterways, areas subject to erosion and pre-existing bush fire risk that warrants careful management.

For those areas proposed to have a 2ha minimum lot size, it is also proposed to rezone this land from RU4 Primary Production Small Lots Zone to R5 Large Lot Residential Zone. The balance of the existing RU4 Primary Production Small Lots Zone land will remain zoned as such.

To assist in the understanding of the proposed land zoning and minimum lot size recommendations as contained within the Planning Proposal an extract of these proposed changes (shown by map) is provided as *Attachment 4* for Councillors information and reference.

Land supply and demand

One of the key components of the Rural Lands Strategy was the preparation of a land supply and demand analysis to determine the amount of additional rural residential lots that could be reasonably supported within these areas.

This analysis was undertaken against a number of factors such as existing levels of supply and demand in both Albury and surrounding LGA's such as Wodonga and Greater Hume Shire (Jindera and Gerogery), demands on infrastructure provision/upgrade requirements, social, amenity and environmental impacts, as well as, consideration of natural hazards.

This land supply and demand analysis, prepared as part of the Rural Lands Strategy, also assessed the level of supply of residential and urban zoned land. This analysis confirmed that there is already an extensive supply of residential and urban zoned land in both Albury (in Thurgoona/Wirlinga) and Wodonga (in Leneva) and for this reason, no land is proposed to be rezoned for these purposes.

Similarly, the same analysis determined that there is already an extensive supply of large lot residential and rural residential/lifestyle land in Albury (in Table Top), Greater Hume (in Jindera and Gerogery) and Wodonga ranging in size from 4,000m² up to 8ha. Notwithstanding the above, the Rural Lands Strategy does seek to increase this level of supply further, so as to provide a greater variety and choice of rural residential land, as well as providing rural residential lifestyle opportunities within close proximity to the urban areas of Albury and Wodonga that won't adversely affect the current environmental and amenity values of this area.

In sum, the Planning Proposal seeks to increase the level of supply of rural residential lots in Splitters Creek by 44 lots. This is a 38% increase compared to the current dwelling stock in the area and will provide approximately 20.9 years of vacant land supply based on an a historical take-up rate of 2 lots per annum.

Natural hazards

Matters regarding natural hazards have been assessed and the area is not flood prone or likely to be subject to land contamination.

Notwithstanding, the entire area of Splitters Creek is classified as being bush fire prone. As a consequence, the Rural Lands Strategy was prepared in consultation with the NSW Rural Fire Service (NSW RFS). Whilst during the preparation of the Rural Lands Strategy the NSW RFS did not oppose proposed settlement plan recommendations, this public authority did identify Splitters Creek

AlburyCity - Planning & Development Committee Agenda

as having a pre-existing 'high' bush fire risk rating, and consequently, emphasised that any potential increase in population needs to be managed carefully with respect to bush fire.

Accordingly, modest settlement pattern recommendations (38% growth) have already, to a large extent, responded to the existing bush fire risk by confining higher densities to areas lower in the catchment that benefit from proximity to the Riverina Highway for emergency access/egress purposes. Whilst higher in the catchment in more isolated parts of Splitters Creek, lower densities (4-8ha minimum lot sizes) have been proposed to assist in limiting future resident exposure to existing bush fire risk. Also, the larger recommended lot sizes (2-8ha) are considered sufficiently large enough to accommodate a regime of proposed bush fire protection measures relating to access/egress, asset protection zones and defensible space/s.

In addition, the Rural Lands Strategy also recommended that a Bush Fire Risk Management Plan for Splitters Creek, that documents all treatments and activities that seek to manage bush fire risk, be prepared in consultation with the NSW RFS prior to any rezoning being undertaken in Splitters Creek.

As a consequence, a *Preliminary Draft Splitters Creek Bush Fire Risk Management Plan* has subsequently been prepared by AlburyCity in consultation with the NSW RFS will be included (upon completion) as an Appendix to the Planning Proposal.

The Preliminary Draft Splitters Creek Bush Fire Risk Management Plan primarily documents all treatments, land management activities and actions (inclusive of hazard reduction works, community education campaigns and property planning measures) undertaken and/or proposed by AlburyCity Council, other responsible agencies and individual person(s) and landowners to manage the bush fire risk in Splitters Creek.

At this time, it is acknowledged that the Preliminary Draft Splitters Creek Bush Fire Risk Management Plan has not been finalised (pending NSW RFS feedback, further investigations required to address access/egress requirements and confirm the adequacy of water supply for firefighting purposes).

Accordingly, whilst preliminary draft documentation has been prepared, it is recommended that the Splitters Creek Preliminary Draft Bush Fire Risk Management Plan be finalised prior to the public exhibition of Planning Proposal documentation in consultation with the NSW RFS.

Infrastructure provision

The Rural Lands Strategy incorporated an Infrastructure Plan that details physical infrastructure (inclusive of utilities and transport network) upgrades required, approximate preliminary costings and timeframes (where relevant) to accommodate settlement pattern recommendations.

Key recommendations are outlined as follows:

- Extension of shared path on Riverina Highway (approx. 3.5km) from Wonga Wetlands to Splitters Creek Road to create a cyclist/pedestrian connection between Splitters Creek and the Albury urban area (approx. \$780,000 – medium/long term);
- Investigation of the viability of creating an emergency access between Splitters Creek Road and Centaur Road (approx. 1.1km) suitable for emergency service vehicles (approx. \$TBC – short-term). It is noted that at this time, these investigations have not commenced.
- Upgrade and maintain geometry of Splitters Creek Road (related to the sealing of road shoulders only) from Riverina Highway to Odewahn Road (approx. 2.5km) to improve cyclist/pedestrian safety and amenity (approx. \$200,000 – medium-term);

AlburyCity - Planning & Development Committee Agenda

- Investigate improvements to the Riverina Highway and Splitters Creek Road intersection (approx. \$TBC – medium-term). It is noted that at this time, these investigations have not commenced.

These works have been appropriately costed and staged in the Rural Lands Strategy and will form part of Council's future budgets. In addition, the subject Planning Proposal does not create any additional demands upon designated state public infrastructure.

It noted that all recommended infrastructure upgrades and investigations relate exclusively to the road network on the basis that modelling undertaken to verify utility infrastructure system capacity and upgrade requirements, as well as liaison with relevant service providers has confirmed that:

- It is not financially viable to extend town reticulated water supply or reticulated sewerage infrastructure to Splitters Creek, and consequently, reticulated water should continue to be delivered and administered through private schemes and sewerage management and disposal should continue by on-site measures due to the size of the current and proposed lots;
- No reticulated stormwater management works are required to facilitate development in Splitters Creek due to the size of the current and proposed lots;
- No expected electricity infrastructure upgrades are planned. Any future development in the area will require augmentation works to be funded from new customer contributions; and
- Existing communications infrastructure (including the roll out of NBN or equivalent) will accommodate both existing and new dwellings. Associated costs are to be borne by new customers.

Service infrastructure constraints have been critical in determining recommended densities and the spatial extent of any recommended additional subdivision opportunities (via amendments to land use zoning and minimum lot size provisions).

Impacts on existing future agricultural pursuits and urban release opportunities

It is noted that the preparation, public exhibition and endorsement of this Planning Proposal (consistent with Rural Lands Strategy settlement recommendations) satisfies previous Council commitments to investigate and implement a settlement pattern in both Table Top and Splitters Creek that provides for continued rural lifestyle opportunities and also ensures that both existing agricultural and/or future urban land use capabilities (where relevant) are not compromised.

This has to a large extent been achieved through appropriate settlement pattern recommendations informed by a regime of background investigations that include a survey of existing land uses, an analysis of potential land use conflicts that may arise and an urban land capability assessment.

These investigations confirm that, in recognition of existing settlement patterns, environmental constraints, bush fire hazard and poor accessibility, there are no notable land use activities (including commercial farming pursuits) or land identified as 'prime' land suitable for urban development purposes in Splitters Creek to warrant additional protection from rural lifestyle development.

However, these investigations have identified that the only land use conflicts in Splitters Creek particularly relate to bush fire risk on surrounding lands and sensitive environmental values at the interface with surrounding environmental zones.

Settlement pattern recommendations respond to the existing bush fire risk as documented earlier in this report. In response to environmental considerations, lower densities (4-8ha minimum lot sizes) recommended higher in the Splitters Creek catchment where terrain is steeper and interface with

AlburyCity - Planning & Development Committee Agenda

surrounding environmental lands becomes more prevalent provides an appropriate transition/buffer that should aid and assist in an avoidance of adverse impacts.

Consequently, changes recommended by this Planning Proposal to the land zoning and minimum lot size provisions, as they relate to Splitters Creek are consistent with and simply seek to implement the same settlement pattern recommendations as that provided by the Rural Lands Strategy.

Table Top:

Proposed settlement outcomes

Informed by detailed investigations, documented analysis and technical evidence (inclusive of constraints analysis, agricultural and urban land capability assessments, rural land use survey, demand and supply assessment) an overview of the Rural Lands Strategy recommended settlement pattern, consequential amendments to ALEP 2010 and other relevant issues as they relate to Table Top are outlined below.

The Planning Proposal, consistent with the Rural Lands Strategy recommends that land located along Table Top Road and surrounding the Lara Lakes rural residential estate is recommended to be developed at a 2ha minimum lot size. This reflects historic subdivision activities and land fragmentation that has occurred under previous Hume Shire planning controls on land now recognised as being relatively flat, having direct access to the local road network and connected to reticulated water.

A small area of discrete land immediately adjoining to the north of the Lara Lakes rural residential estate be developed at a 4ha minimum lot size, which will contribute to the diversity of rural residential opportunities and provide a transition in lot sizes to larger broad-acre farming lots located to the north.

In addition, it is also recommended that land located on the northern side of Table Top Road, south side of Perryman Lane and to the west along Dights Forest Road be developed at an 8ha minimum lot size. This provides a balance in providing for a diversity of rural lifestyle opportunities and an appropriate transition between rural residential living outcomes to the south and broad-acre farming pursuits to the north. In areas of land north of Burma Road and Perryman Lane a reduction to a 40ha minimum lot size also has been recommended. This is reflective of the current range of existing lot sizes, provides some modest subdivision opportunities and does not impede existing small scale broad-acre farming pursuits.

For those areas proposed to have a 2ha minimum lot size, it is also proposed to rezone this land from RU4 Primary Production Small Lots Zone to R5 Large Lot Residential Zone with the exception of that land located immediately east of Table Top Village where an RU5 Village Zone is proposed. The balance of the existing RU4 Primary Production Small Lots Zone land will remain zoned as such.

That land currently zoned RU1 Primary Production (where a 40ha minimum lot size is recommended will remain zoned as such, with the exception of a small area of land on the northern side of Table Top Road and to the east of Mitchell Road, which is proposed to be rezoned from RU1 Primary Production to RU4 Primary Production Small Lots with an 8ha minimum lot size. This reflects existing lot sizes and previous approvals for the area, does not create uneconomic demands on infrastructure provision and assists in providing an additional buffer between rural residential living outcomes to the south and broad-acre farming pursuits to the north.

To assist in the understanding of the proposed land zoning and minimum lot size recommendations as contained within the Planning Proposal an extract of these proposed changes (shown by map) is provided as *Attachment 4* for Councillors information and reference.

AlburyCity - Planning & Development Committee Agenda

Land supply and demand

One of the key components of the Rural Lands Strategy was the preparation of a land supply and demand analysis to determine the amount of additional rural residential lots that could be reasonably supported within these areas.

This analysis was undertaken against a number of factors such as existing levels of supply and demand in both Albury and surrounding LGA's such as Wodonga and Greater Hume Shire (Jindera and Gerogery), demands on infrastructure provision/upgrade requirements, social, amenity and environmental impacts as well as consideration of natural hazards.

This land supply and demand analysis, prepared as part of the Rural Lands Strategy, also assessed the level of supply of residential and urban zoned land. This analysis confirmed that there is already an extensive supply of residential and urban zoned land in both Albury (in Thurgoona/Wirlinga) and Wodonga (in Leneva) and for this reason, no land is proposed to be rezoned for these purposes.

Similarly, the same analysis determined that there is already an extensive supply of large lot residential and rural residential/lifestyle land in Albury (in Table Top), Greater Hume (in Jindera and Gerogery) and Wodonga ranging in size from 4,000m² up to 8ha. Notwithstanding the above, the Rural Lands Strategy does seek to increase this level of supply further, so as to provide a greater variety and choice of rural residential land, as well as providing rural residential lifestyle opportunities within close proximity to the urban areas of Albury and Wodonga that won't sterilise or remove the long term urban development opportunities of currently rural zoned land or that will adversely affect existing viable agricultural pursuits.

In sum, the Planning Proposal seeks to increase the level of supply of rural residential lots in Table Top by 367 lots. This is a substantial increase compared to the current dwelling stock in the area (approximately 400 lots) and will provide approximately 35.2 years of vacant land supply based on an historical take-up rate of 10 lots per annum.

It is acknowledged that settlement pattern recommendations and resultant proposed changes to land zoning and minimum lot size provisions will enable the potential for a significant release of rural lifestyle lands in Table Top. The clear identification of rural residential/rural lifestyle growth areas is considered appropriate on the basis that this change provides greater certainty and confidence regarding long term land uses and minimises opportunities for future land use conflicts.

It is noted that proposed changes do not prevent existing agricultural practices from continuing. Importantly, however, the proposed changes will restrict any potential intensification of activities that would otherwise conflict with future planned rural residential/rural lifestyle development.

Natural hazards

Matters regarding natural hazards have been assessed and are generally considered to be satisfactory in this instance, as they relate to Table Top. It is noted that the area is not flood prone and only a small portion of this area is classified as being bushfire prone, which coincides with areas where no further development opportunities are proposed.

Furthermore, the likelihood of land contamination is also considered low. Nonetheless, the subject land may be contaminated by previous and current land use activities including agricultural/horticultural activities, sheep and cattle dip sites etc. However, a combination of both topographical constraints, limited agricultural capabilities and proximity to existing urban and village areas has generally restricted historic and current agricultural activities to low impact uses such as

AlburyCity - Planning & Development Committee Agenda

extensive grazing and crop or fodder production. Consequently, the likelihood of land contamination is considered low.

Infrastructure provision

The Rural Lands Strategy incorporated an Infrastructure Plan that detailed physical infrastructure (inclusive of utilities and transport network) upgrades required, approximate preliminary costings and timeframes (where relevant) to accommodate settlement pattern recommendations.

Key recommendations are outlined as follows:

- Water supply mains upgrades to Table Top required (approx. \$3,626,510 + 10% contingency);
- Table Top Reservoir upgrade required (approx. \$540,000 + 10% contingency);
- Upgrade and maintain geometry of Table Top, Tynan and Gerogery Roads (including the sealing of road shoulders and the provision of pedestrian path upgrades) to improve cyclist/pedestrian safety and amenity (approx. \$1,740,000– short/medium-term pending location); and
- Investigate improvements at the Hume Highway intersection with Tynan and Burma Roads to resolve safety and vehicle storage issues (approx. \$TBC – short-term).

These works were appropriately costed and staged in the Rural Lands Strategy and will form part of Council's future budgets. In addition, the subject Planning Proposal does not create any additional demands upon designated state public infrastructure.

In addition to above listed infrastructure improvements, modelling undertaken to verify utility infrastructure system capacity and upgrade requirements, as well as liaison with relevant service providers has confirmed that:

- It is not viable to extend town reticulated sewerage to Table Top, and consequently, sewerage management and disposal should continue by on-site measures due to the size of the current and proposed lots;
- No reticulated stormwater management works are required to facilitate development in Table Top due to the size of the current and proposed lots;
- No expected electricity infrastructure upgrades are planned. Any future development in the region will require augmentation works to be funded from new customer contributions; and
- Existing communications infrastructure (including the roll out of NBN or equivalent) will accommodate both existing and new dwellings. Associated costs are to be borne by new customers.

Service infrastructure constraints have been critical in determining recommended densities and the spatial extent of any recommended additional subdivision opportunities (via amendments to land use zoning and minimum lot size provisions).

It is noted that the combination of more intensive and/or extensive rural lifestyle releases above those recommended by this Planning Proposal would contribute to a dispersed settlement pattern, which could place considerable pressure on Council resources and raise community expectations in relation to community and physical infrastructure improvements beyond sustainable levels of provision.

Impacts on existing future agricultural pursuits and urban release opportunities

It is noted that the preparation, public exhibition and endorsement of this Planning Proposal (consistent with Rural Lands Strategy settlement recommendations) satisfies previous Council commitments to investigate and implement a settlement pattern in both Table Top and Splitters Creek

AlburyCity - Planning & Development Committee Agenda

that provides for continued rural lifestyle opportunities and also ensures that both existing agricultural and/or future urban land use capabilities (where relevant) are not compromised.

This has to a large extent been achieved through appropriate settlement pattern recommendations informed by a regime of background investigations that include a survey of existing land uses, an analysis of potential land use conflicts that may arise and an urban land capability assessment.

These investigations confirm that, in recognition of larger land holdings, the primary use of land for broad acre agriculture, buffer distances from existing urban, rural residential and rural lifestyle land uses, that areas to the north and north-east of Table Top are identified as being ideal for ongoing primary production purposes, and conversely, having only 'marginal' potential for urban development. Notwithstanding, Rural Lands Strategy settlement pattern recommendations seek a reduction in minimum lot size from 100ha down to 40ha, which is reflective of the current range of existing lot sizes, providing some modest subdivision opportunities that do not impede existing small scale broad-acre farming pursuits, which to a large extent, protect both existing and future agricultural pursuits.

This has been supported via the recommended introduction of a 4ha and 8ha minimum lot size in central and eastern areas of Table Top that provides a balance in providing for a diversity of rural lifestyle opportunities and an appropriate transition between rural residential/rural lifestyle living outcomes to the south and broad-acre farming pursuits to the north and north-east. It is further noted that recommended transition densities and land use zoning has been discretely used to aid and assist buffers between rural residential/rural lifestyle living outcomes and nearby rural industrial and/or rural agricultural land use activities (where relevant).

These investigations also confirm that, in recognition of existing large land parcels, the natural progression of the Thurgoona/Wirlinga growth area, proximity to existing utilities and road network infrastructure (including the Hume Highway), land located in the south-eastern parts of the Table Top have been identified as having 'prime' urban development potential.

This area provides a strategic opportunity to cater for the long term urban expansion of Albury. The area represents a logical northward expansion of the Thurgoona-Wirlinga growth area and the only remaining area of undeveloped broad-acre land that directly abuts the urban area of Albury.

Accordingly, the Rural Lands Strategy did not include any recommendations for rezoning or reducing the current minimum lot size controls of this land until such time as a structure planning process is undertaken in the medium term to determine the optimal future use and associated development pattern for this area.

Outside of that land identified for existing and ongoing broad-acre farming pursuits and that land required for long term urban expansion, the balance of Table Top has been identified as having 'moderate' urban development potential and as a result is considered ideal for rural residential/rural lifestyle living outcomes. These areas are generally characterised as being of lower agricultural quality, having a high level of land fragmentation and being isolated from existing utilities and road network infrastructure which renders it unsuitable for either broad acre farming or urban development.

In summary, whilst settlement recommendations seek to introduce rural residential/rural lifestyle living opportunities into Table Top, this has not come at the expense of existing agricultural pursuits and urban release opportunities that have been appropriately protected through both land use zoning and minimum lot size provisions.

Consequently, changes recommended by the Planning Proposal to the land zoning and minimum lot size provisions as they relate to Table Top are consistent with and simply seek to implement the same settlement pattern recommendations as that provided by the Rural Lands Strategy.

AlburyCity - Planning & Development Committee Agenda

Risk

- Business Risk - It is acknowledged that future development, as facilitated by Planning Proposal outcomes, will necessitate investment in infrastructure provision (including upgrades), namely utilities and transport. Consequently, this project does carry inherent business risks due to the capital costs involved, however, these were suitably identified in the Rural Lands Strategy and acknowledged by Council in its consideration of the Rural Lands Strategy.

Preliminary infrastructure costings and sequencing detailed in the Rural Lands Strategy for both Table Top and Splitters Creek (total approximately \$7.3M) will need to be balanced against the costs for AlburyCity and the wider community.

- Corporate Risk - The preparation, public exhibition and endorsement of this Planning Proposal (consistent with Rural Lands Strategy settlement recommendations) satisfies previous Council commitments to investigate and implement a settlement pattern in both Table Top and Splitters Creek that provides for continued rural lifestyle opportunities and also ensures that both existing agricultural and/or future urban land use capabilities (where relevant) are not compromised.

It is noted that there has previously been some resistance to Rural Lands Strategy recommendations relating particularly to minimum lot size provisions, especially where either no change to existing minimum lot size provisions are proposed and/or where recommendations are not aligned with individual(s) expectations/aspirations.

The Rural Lands Strategy findings and recommendations which form the basis of this Planning Proposal have been balanced against supply and demand position, an avoidance of potential land use conflicts, environmental constraints and demands on infrastructure provision.

In recognition of the extensive consultation undertaken to date, Council adoption and NSW Department of Planning and Environment endorsement of the Rural Lands Strategy, recommendations consistent with the updated Rural Lands Strategy do not carry significant corporate risk.

It is acknowledged however that the recommendations of the Rural Lands Strategy for Table Top and Splitters Creek were largely based on high level investigations. The very nature of the Rural Lands Strategy as a broad based strategic plan means that the localised and especially site specific issues and characteristics have not been considered in detail. Site specific investigations may identify issues that support further consideration of development opportunities outside or beyond that provided in the Rural Lands Strategy.

On this basis, AlburyCity is willing to consider site-specific conditions/circumstances via an independent Planning Proposal where more intensive development outcomes are sought above and beyond that provided by the recommendations of the Rural Lands Strategy.

- WHS & Public Risk - Matters regarding WHS and public risk were considered as part of the preparation and endorsement of the Rural Lands Strategy. In particular, it is noted that the entire area of Splitters Creek and a small portion of Table Top are classified as being bush fire prone.

As a consequence, Rural Lands Strategy preparation, content and subject matter were informed by consultation with the NSW RFS (as detailed earlier in this report). Whilst informal liaison has been undertaken to date; particularly to assist the preparation of a Preliminary Draft Splitters Creek Bush Fire Risk Management Plan, formal consultation with the NSW RFS is

AlburyCity - Planning & Development Committee Agenda

also scheduled as part of this Planning Proposal documentation.

- Delivery Program Risk - It is acknowledged that future development, as facilitated by Planning Proposal outcomes, will necessitate investment in infrastructure provision (including upgrades), namely utilities and transport network. Consequently, this project does carry some inherent delivery program risks as additional demand will be placed on our existing assets and drive demand for new infrastructure. The Delivery Program will need to be monitored and reviewed to ensure Council is planning appropriately and therefore able to meet current and future demands.

Community Engagement

The Rural Lands Strategy that has informed the preparation of this Planning Proposal involved extensive consultation with all relevant persons, landowners, service providers and Government Agencies over a 14 month period.

Notwithstanding extensive consultation undertaken to date, this Planning Proposal will be exhibited in accordance with the requirements of section 57 of the *Environmental Planning & Assessment Act 1979* and the NSW Department of Planning & Environments: *A guide to preparing local environmental plans (August 2016)* and any conditions of the Gateway Determination (to be issued).

The formal public exhibition process will be undertaken consistent with other previously exhibited Planning Proposals, outlined as follows:

- Notification letters dispatched to affected landowners, previous submitters, key stakeholders and other interested parties prior to exhibition commencement;
- Notification letters and associated documentation dispatched to relevant Government Agencies (inclusive of the NSW RFS) for comment and review;
- Public notice published in the Border Mail;
- Static displays containing all exhibition material for viewing purposes in the foyer of the Council Administration Building, LibraryMuseum and Lavington Library;
- Information Sessions in Table Top and Splitters Creek to provide a forum for discussion, input and feedback;
- All exhibition material being made available on the AlburyCity website (including regular project updates, copies of presentation materials and notes), as well as the ability to lodge online inquiries and/or submissions by e-mail); and
- Strategic Planning staff available (on demand or by appointment) to assist with any inquiries relating to the Planning Proposal.

Options

Council has the following options in relation to this report:

1. Endorse the Planning Proposal that seeks to rezone land in Table Top and Splitters Creek (consistent with Rural Lands Strategy settlement recommendations) and forward this Planning Proposal to the NSW Department of Planning & Environment seeking a Gateway Determination; or
2. Take no further action with regards to the Planning Proposal and the proposed amendment.

In this instance, it is recommended that Council proceed with Option 1 for the reasons outlined earlier in this report.

Conclusion

AlburyCity - Planning & Development Committee Agenda

The subject Planning Proposal seeks to implement the land zoning and minimum lot size recommendations from the previously Council adopted (and NSW Department of Planning & Environment endorsed) Rural Lands Strategy for Table Top and Splitters Creek (December 2015).

Rural Lands Strategy settlement recommendations have been informed by an exhaustive regime of background investigations including detailed site analysis, agricultural and urban land capability assessment, rural land use survey and a rural lifestyle housing demand and supply assessment.

The Rural Lands Strategy was prepared over a 14 month period and involved extensive consultation with all relevant persons, landowners and government agencies/public authorities and has sought (through investigation) to balance rural lifestyle development outcomes against a variety of factors including; the protection of existing agricultural pursuits and urban growth opportunities, environmental impacts, natural hazards, land use conflicts, housing supply and demand and impacts on sustainable infrastructure provision.

The public exhibition of this Planning Proposal provides the opportunity to accommodate future rural lifestyle settlement back into both Table Top and Splitters Creek which was previously put in abeyance during the preparation of ALEP 2010, in lieu of further more detailed investigations. The public exhibition of this Planning Proposal will now provide an opportunity for further land owner, community, agency and other stakeholder engagement on these future opportunities.

Recommendation

That the Committee recommends to Council that Council:

- a. Endorse the Planning Proposal and forward it to the Minister for Planning seeking an Amendment to the *Albury Local Environmental Plan 2010* (consistent with Rural Lands Strategy settlement recommendations) and request that a Gateway Determination be issued, including the delegation of Plan making powers, so as to enable the public exhibition of the Planning Proposal pursuant to the *Environmental Planning & Assessment Act 1979*;
- b. Upon receipt of a Gateway Determination under Section 56 of the *Environmental Planning & Assessment Act 1979*, Council place the Planning Proposal and any supporting material on public exhibition pursuant to any requirements of the Gateway Determination and Section 57 of the *Environmental Planning & Assessment Act 1979*; and
- c. Subject to the conditions of the Gateway Determination undertake those actions necessary to address outstanding matters including finalising the Preliminary Draft Splitters Creek Bush Fire Risk Management Plan in liaison with the NSW Rural Fire Service prior to the formal public exhibition of the Planning Proposal.

PDC8 OFFICERS REPORTS FOR NOTING

PDC8.1 2016 Albury Wodonga Business Survey Key Findings

DATE 22 September 2016

CONFIDENTIAL No

FURTHER ENQUIRIES TO Andrew Cottrill
Economic Development

PHONE 6023 8268

Purpose of Report

To present the Key Findings of the 2016 Albury Wodonga Local Business Survey.

Background

The Albury Wodonga Business Directory is a joint initiative of AlburyCity and the City of Wodonga. The objective of this project is to conduct an annual survey of Albury and Wodonga businesses, as well as maintain an online and publicly accessible business directory website.

The Albury Wodonga Business Survey has been conducted annually for eight consecutive years. The 2016 survey was run over a three week period from Monday 8 August 2016 to Friday 26 August 2016. This year 2,958 surveys were distributed to local businesses in the Albury and Wodonga Local Government Areas, with a total of 517 responses received (17%). This sample size ensures that the information gained is representative of the Albury Wodonga business region and therefore holds a high level of credibility when being utilised to analyse local business trends.

The survey was delivered online via Survey Monkey for the convenience of businesses and to continue to champion the digital approach.

Key findings allow stakeholders to gain a better understanding of the major trends, opportunities, challenges and considerations of the local business community. Results are useful in guiding the strategic direction of regional economic development conversations with State and Federal Government, industry groups and other key stakeholder organisations.

Issues

The Key Findings Summary report for the 2016 Albury Wodonga Local Business Survey was released to the public on 16 September 2016.

On average, results were fairly consistent with the 2015 findings.

EMPLOYMENT

- Survey responses show 21% of businesses expect to increase their staff numbers within the next 12 months, slightly down from 2015.
- The majority of businesses (50%) expect no change to employment levels, with a further 26% unsure and 3% anticipating a decrease in employees.
- Over 11,200 people were employed by survey respondents. Of these, 8,643 were employed full time, 1,108 part time and 1,489 casual.
- While 75% of businesses did not experience difficulties filling job vacancies, of the 25% that did, technicians and trade workers and professionals were the most challenging positions to fill.

AlburyCity - Planning & Development Committee Agenda

PROFITABILITY

- 43% of businesses experienced an increase in profitability over the last 12 months, with the large majority (89%) reporting profitability increases between 1% - 30%.
- 22% reported a decrease in profitability and of those, 54% indicated that the decrease was in the range of 1%-15%.

KEY FACTORS IMPACTING BUSINESS

- 22% of businesses reported that access to finance had a positive, or very positive impact on their business operations.
- Business confidence has improved from 2015, with 43% of businesses reporting positive and very positive effects on local businesses.
- Industrial relations issues continue to have negligible impacts on the majority of local businesses, with 76% reporting 'no impact'.
- There was an 8% decline from 2015 in the negative impacts of increased costs, and a 7% increase in those businesses reporting no impact from this external force.
- Global economic conditions had no impact on more than half of surveyed businesses.
- Albury Wodonga's location on the Victorian and NSW border presented cross border challenges for 41% of businesses - 1% decrease from 2015.

DIGITAL ECONOMY

- More than half (53%) of survey respondents generate sales through the internet, with website, Facebook and email marketing the most popular online products used in business operations.
- The biggest digital barrier continues to be the time and effort required to implement new systems and the costs involved.

BUSINESS CONFIDENCE AND FUTURE GROWTH

- Capital investment continues to trend positively, with 59% of respondents intending to invest in building, technology, plant or equipment over the next 12 months.
- Local businesses have shown a continued commitment to giving back to the local community, with 96% of respondents reporting sponsorship, dollar donations or in-kind contributions over the last 12 months.
- The number of businesses engaging in international trade has remained steady over the last 12 months, with 87% of respondents indicating no intention to trade beyond national borders.
- Respondents continue to be optimistic about their business outlook, with 68% reporting a positive or very positive year ahead.
- Similarly, confidence levels are strong for the local economy with more than half of business operators (57%) predicting positive or very positive impacts over the next 12 months, and only 13% indicating the local economy will have a negative impact on their operations - a decline of 4% on 2015 figures.

Presentation & Distribution

The 2016 Key Findings Report is available in electronic format (link provided Attachment 1) together with a short video from both Council websites and the Albury Wodonga Business Directory website. Hardcopies of the report are also available upon request.

This report has been distributed to all survey respondents, as well as key stakeholders including State and Federal Government agencies, Ministers and industry groups. Presentations of the key findings will be made to the Albury Northside and Wodonga Chambers of Commerce at their November monthly meetings.

Risk

AlburyCity - Planning & Development Committee Agenda

- Business Risk – The report constitutes a genuine statistically valid snapshot of business sentiment, future investment and employment focus, business impediments. Failing to conduct this survey would be detrimental to AlburyCity's ongoing relationship with the business community, ability to advocate on their behalf, and to effectively drive and contribute to long term regional economic development planning and its engagement with State and Federal Government, industry groups and other key stakeholder organisations.

Community Engagement

This year 2,958 surveys were distributed to local businesses in the Albury and Wodonga Local Government Areas, with a total of 517 responses received (17%). This sample size ensures that the information gained is representative of the Albury Wodonga business region and therefore holds a high level of credibility when being utilised to analyse local business trends.

Overall findings were positive and consistent with the previous year.

Conclusion

The Key Findings Summary report for the 2016 Albury Wodonga Local Business Survey is intended to provide greater understanding of the Albury Wodonga economy, the level of confidence held by business and the positive and negative impacts associated with a range of current business issues.

The results from this survey have provided an important snapshot of local business and industry, and will allow the two Councils and other key stakeholders to better understand and consider the challenges and opportunities being faced by local businesses.

Survey results will also be considered in the creation and implementation of regional economic development strategies, and as a tool to guide the strategic direction of lobbying of State and Federal Government by Council, industry groups and other key stakeholder organisations.

Recommendation

That the Committee recommends to Council that Council receive and note the report.
